Spiral bits provide a shear cutting edge that leaves a smoother cut than standard router bits.

UP CUT SPIRAL: Ideal for smooth finishes and rapid chip removal. Up cut spirals create a clean edge on the side of the material that is farthest from the router.

DOWN CUT SPIRAL: Down Cut Spirals ensure a clean edge on the side of the material closest to the router. Perfect for clean, top edges in handheld routing or CNC applications. Performs best with hardwoods, softwoods, plywood, MDF, and hard plastics for versatile woodworking applications. Designed for hand-held routers, router tables, and CNC machines in a wide variety of applications.
